## VARIOTEST

The Condor-Variotest is a universal test The Condor-VARIOTEST instrument featuring acoustic signals for:

Continuity and/or resistance
testing up to $20 \mathrm{k} \Omega$

Direct and alternating voltage checking up to 500 V

Polarity test for D.C. from 6 V to 500 V

Phase checking (outer conductor) Mp conductor and protective conductor

Checking function of RCCB's with $I \Delta N$ max. 30 mA

Semi-conductor testing

- is protected against external voltages up to 500 V and limits the current input to max. 4 mA . Destruction as a result of incorrect handling is practically impossible.
- distinguishes between D.C. and A.C. voltages or a resistance value by sound pitch and frequency change respectively.
- is equipped with an ON-OFF switch.
- is supplied with the battery inserted and is ready for immediate use.
- Measuring probes and leads acc. to IEC 1010 Part 2-031.

## ROTATEST

The Condor-Rotatest indicates the phase sequence in a
three-phase mains circuit and thus the direction of rotation for electromotive appliances.

The additional phase monitoring glow lamps also indicate whether all the outer conductors are live and ensure that the neutral and outer conductors have not been interchanged.

VDE 0100 stipulates:
Three-phase sockets shall be connected in such a manner that a rotation field to the right is reached when looking at the front of the sockets clockwise.

Measuring probes and leads acc. to IEC 1010 Part 2-031.

| Order reference | Packing (units) | Weight (in g) | Part No. |

## Multifunction timer relay FMF

Multifunction timer relay FMF

- Multifunction relay in compact industrial standard casing
- 8 selectable time ranges
- Universal current
- 2 SPDT's
- Remote-control terminal
- Voltage activation

The multifunction timer relay FMF is specifically designed for rough industrial environments. All inputs and outputs are both interference free and non-destructive at voltage surges of up to 2 kV . Contact activation may be carried out not only by conventional means such as an isolated contact (between A 1 and B 1 ) but also by applying the operating voltage to B1. This helps to reduce wiring and contact requirements of the control and prevents destruction of the devices due to faulty wiring.
Adjustable functions:

- delay on make - on-delay single shot
- delay on break - flashing

## Remote control:

A remote control can be realized with 2 wires connected to the terminals Z1 / Z2 and a $100 \mathrm{k} \Omega$ potentiometer, whereby the FMF potentiometer must be set to 0 .

| Order reference | Time | Operating voltage <br> $U_{B}(V-A C / D C)$ | SPDT's | Part No. |
| :--- | :---: | :---: | :---: | :---: |
| FMF | $0,1 \mathrm{~s}-\mathrm{ca} .7 \mathrm{~h}$ | $22,5-240$ | 2 | 230403 |
